

Experience the Woodland way

Our values help us stay true to a singular focus; building a dream kitchen for every customer.

Woodland strives to exceed expectations with high-quality, fashion forward cabinetry that reflects your personal style.

We're doing our part to ensure a better tomorrow. Woodland is committed to reducing our carbon footprint by reducing energy usage, improving air quality, and reducing our waste stream.

We are proud to be 100% family owned and the number one employer in the small town of Sisseton, South Dakota. Our employees are our most valuable resource; producing high-quality American-made custom cabinetry since 1994.

At Woodland, we offer both Woodland Cabinetry and Artizen Cabinetry. Each line offers a wide selection of door styles and finishes from traditional to modern; the possibilities are endless. Your dealer will assist you in choosing the line that captures the look you've been dreaming of.

Wood & Engineered Products

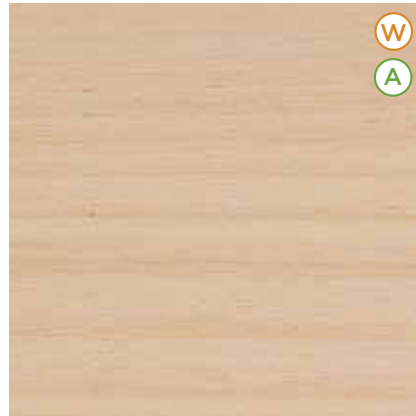

W Woodland A Artizen

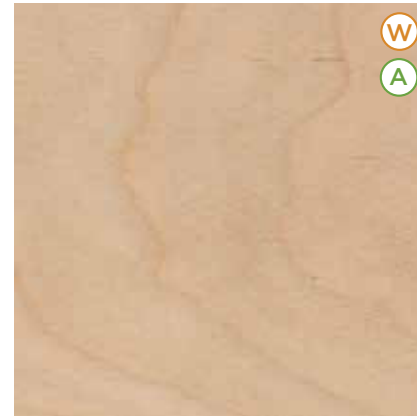

Natural Wood Characteristics

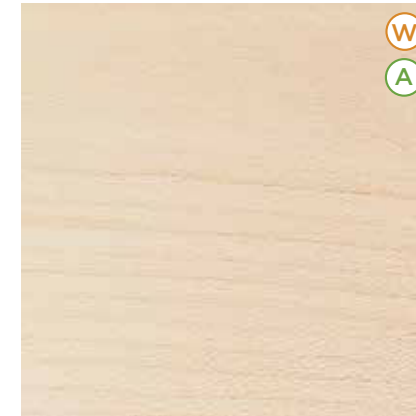

Walnut is a premium hardwood that has long been prized for its rich beauty, warmth and strength. The grain is generally straight and open, but sometimes has wavy or curly patterns. Color can vary from creamy white to light or chocolaty brown, occasionally with darker sapwood streaks. Walnut will “mellow” and lighten as it ages.

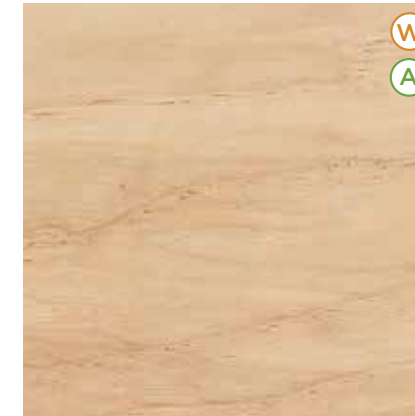

Alder is a hardwood that is lighter in weight and softer than other hardwoods. Alder has a fine, straight grain similar to Cherry and Maple with a uniform honey color. Some tight knots are typically present. Alder stains well across the full color spectrum.

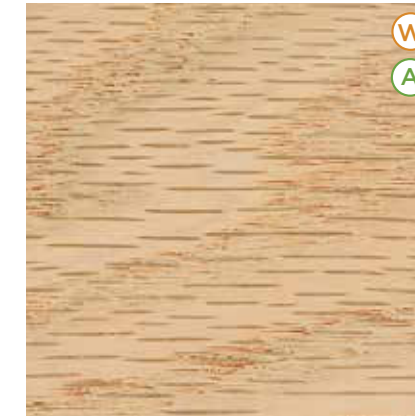

Cherry is a rich, premium hardwood. Coloring can range from pinkish brown, white, green or yellow. Cherry typically has sapwood, pitch pockets, streaks and pin knots and will darken with age.

Maple is a dense, straight-grained hardwood with uniform coloring. When stained, Maple can have a mottled appearance and small mineral streaks. Maple will age slightly over time.

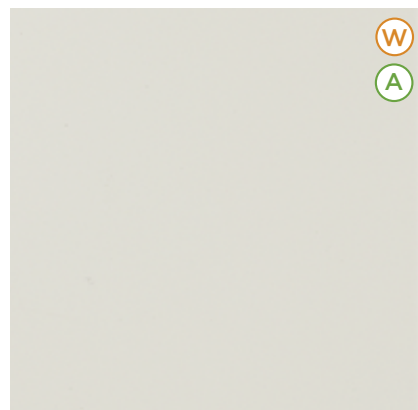

Hickory is a strong hardwood with dramatic color variations and grain patterns. Color can vary from white to deep brown in the same piece of lumber, evening out slightly over time. Hickory will have some knots, mineral streaking, pin holes and burls.

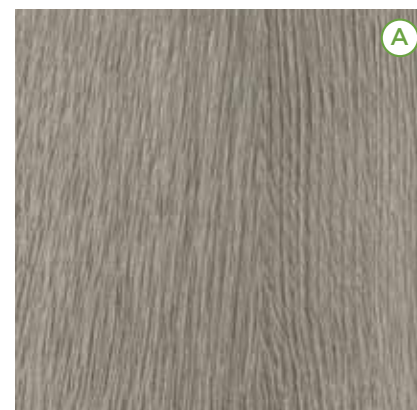

Red Oak is known for its strength and stability and has a prominent open grain. Oak ranges in color from white to yellow to reddish brown. Small pin knots and minor mineral streaking are present. Graining may vary from closely knit to a sweeping arch pattern.

Engineered Products

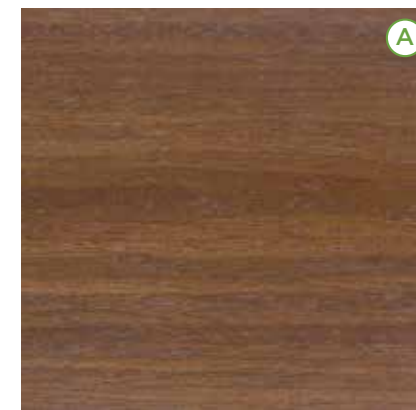

Opaque—Changes in climate conditions cause all wood products to expand and contract. As a result, opaque finished solid wood doors/drawer fronts will show seam lines on all solid wood joints and panels as the seasons change. HDF is more structurally stable and has less expansion and contraction due to seasonal humidity changes than solid wood. Woodland and Artizen use HDF door/drawer front construction wherever possible to minimize expansion and contraction issues with Opaque door styles.

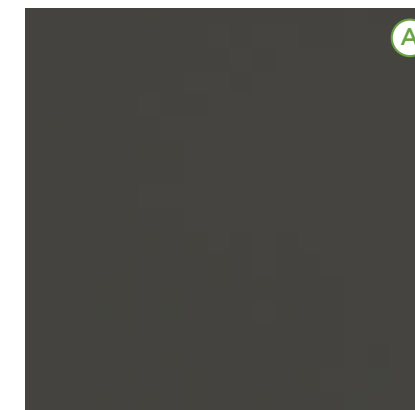

Woodland and Artizen's Rustic offerings in Cherry, Alder, Walnut, Hickory and Oak are hand selected to have more pronounced variations of their respective natural characteristics. You'll find greater color variation, more noticeable grain-ing, and additional knots, mineral streaks, burls and pinholes.

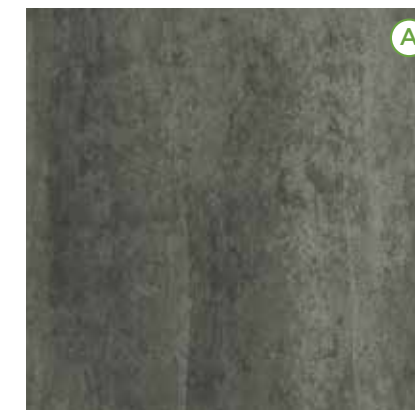

Thermo Structured Surface (TSS) has the look of real wood veneer with greater color uniformity, durability and ease of maintenance. TSS is a thermally hardened surface created when 100% pure melamine resins, along with special phenolics are heated and pressurized. TSS door styles have color coordinating PVC edge band and are available in both horizontal and vertical grain. Grain pattern and color tones are not bookmatched.

Eco Veneer is a sustainable alternative to natural wood. Eco Veneer is a composite veneer that binds wood fibers together and is dyed to mimic the look of natural wood — but with a more consistent grain pattern. Some variation in grain pattern and color tone is to be expected. The veneer is bonded to an engineered core and edge banded. The same material is on both front and back of doors and drawers. Edges will have a coordinating wood veneer edge banding. It's available in horizontal and vertical grain.

Lacquer is dried using UV technology making it extremely durable. The finish can range from ultra-matte to high-gloss. The surface is bonded to an engineered core with a lacquer surface on the front and a matte back. Edges will have either a coordinating or stainless steel PVC edge band. These doors have an antibacterial coating designed to reduce bacteria living on surfaces.

Matte Melamine is a hard thermally fused paper/resin coating that is bonded to an engineered core and edge banded. The same material will be found on both the front and back of doors and drawers with coordinating PVC edge band on the sides. Matte Melamine is highly durable and resistant to scratches and staining. It's available in a variety of natural looking woodgrain, leather, and concrete-like textures. These doors have an antibacterial coating designed to reduce bacteria living on surfaces.

Organize & Accessorize

Our wide selection of modern conveniences will help maximize space and keep your cabinets organized in ways you never imagined.
